

Blackburn's Mixture is a compounded medication used for the treatment of hyperpigmentation and melasma. The improvement of hyperpigmentation in skin of color usually takes 3-6 months, and will not improve without adequate sun protection. *It is imperative that you utilize sunscreen with SPF 30 or higher daily.*

Instructions for use (face): Take the prescribed amount, rub together between fingers/palms until smooth, then apply to the entire face. Avoid use on the neck, around the eyes, and on corners of nose and mouth. Blackburn's Mixture may be applied directly to areas of hyperpigmentation on the body (arms/legs)

Additional tips for use:

- Discontinue use of Blackburn's Mixture 5 days prior to waxing, chemical peels, microdermabrasion, dermaplaning, or any laser treatment
- Common initial reactions to use of Blackburn's Mixture include: skin peeling, dryness, skin lightening, itching
- Adverse Effects: redness, burning (if these symptoms occur stop using Blackburn's Mixture, start use of Vaseline on affected areas, and contact our office)
- Blackburn's Mixture must be refrigerated, and may be used up to 6 months after opening; discontinue use if medication turns brown, or becomes watery
